Technical Deep-Dive

Overview

This chapter covers the Engineering & Architecture perspective of the Pargo Parcels Data Warehouse portfolio project.

The Pargo DW processes 30 million parcels and 150 million tracking events across 36 months (July 2023 to June 2026), providing a comprehensive analytical platform for last-mile logistics operations in South Africa.

Key Topics

- Data architecture and design decisions
- Scale and performance characteristics
- Business value and operational insights
- Machine learning capabilities
- Recommendations for production deployment

Data Scale

- 30.2M parcels processed
- 152.8M tracking events recorded
- 10M active customers
- 4,000 pickup points across 9 provinces
- 150 retail partners across all major verticals
- 500 courier agents
